About Us

Axixe is a leading software and services company for provider directory technology solutions that enable healthcare organizations to improve their directories for referrals, online searching & matching, mobile engagement, appointment scheduling, data validation, and advanced call center capabilities.

We Improve Directories for Care

MDfit has a sole purpose: to improve the provider directories responsible for scheduling, referring, and coordinating care. Core to any patient access strategy is a robust and accurate provider directory. MDfit allows organizations to consolidate and validate their provider directory data for online, mobile, and call center workflows. Our software and professional services brings together your disparate silos of provider data into one easily manageable place. Once validated, MDfit then “fits” a myriad of patient conditions and preferences, allowing you to optimize referral processes, reinvent your “find-a-physician” tools, schedule the most appropriate provider, comply with regulations, and better coordinate care across your organization.

Provider Directory Leadership

MDfit optimizes your provider directory operations for:

-  Reinvented patient access referral work flows that eliminate voicemails, phone calls, and insecure messaging.
-  Clinical condition based scheduling both online and for your schedulers, concierges, and customer service representatives.
-  Single-pane-of-glass management and validation of scheduling protocols and provider data.
-  “Refer Anywhere” with mobile enablement for affiliated and employed providers.
-  Advanced analytics providing insight into search, scheduling, referrals patterns, and call center metrics.

How Does It Work?

We begin by consolidating your multiple provider data sources from systems such as credentialing, scheduling, marketing, insurance, and practice management. We then overlay data validation workflows and a clinical scope of practice for each provider. Finally, we provide ongoing directory management and data governance solutions to ensure data accuracy. The result is a provider directory that empowers your patients, physicians, and customer service representatives with quick and easy access to accurate and relevant provider information.

Once your directory has been improved, MDfit’s online patient scheduling, mobile app directory, and call-center optimization solutions streamline your “find-a-physician”, appointment scheduling, and referral processes with 24x7 online access. Built-in validation workflows allow you to comply with provider directory regulations. Problematic patient access workflows that require multiple phone calls can be eliminated. Among your physicians, provider-to-provider referral communications become optimized.

Ultimately this frictionless MDfit experience reduces patient leakage, improves your bottom-line, and satisfies regulatory compliance.
