

Data Management & Development Datasheet

Data Strategy

When organizations focus on their data, success follows. Our focus is on providing a lean approach to building and integrating innovative solutions that help you reach the full potential of your data. Our data strategy advice can help you build everything from a small transactional database, to data warehouse solutions, using the newest cutting edge technology. Our consultants will determine the most efficient way to manage your data, and give you a strategy that adds value to your business for years to come.

Mobile Data

Mobile technology in healthcare continues to expand rapidly, and with this, mobile data needs are also growing. New devices continue to introduce data streams that significantly contribute to data growth. Axixe helps our customers by designing solutions to harness this data and give insight into what is happening throughout your business.

Database Management

At Axixe, our approach to Database Management involves a complete solution: from the initial design of the infrastructure, the installation of the DBMS, the logical and physical design of the schema, delivering of the solutions, and maintenance after implementation. We partner with you through the entire lifecycle of the project, using our expertise in database development and application design so that your decision makers can leverage the hidden value of your healthcare business data.

Data Integration

Let Axixe create software that helps your diverse systems work together. When designing solutions to exchange data between your companys organizations, we take into account social, political, and organizational factors that impact system-to-system performance. No interface or HL7 message is too tough. Our plug-and-play applications and development methods help produce innovation and quality for you and your customers.

Database Platform & Licensing

In healthcare, the choice of database platform and licensing is critical in achieving the most appropriate and cost effective solution. Our experience will help you select the most efficient IT solution to make your project a success. We have experience in deploying projects on tight budgets with demanding timelines, while delivering a robust and effective system. Our solutions are based on years of experience in detailed analysis of the overall application workload, usage, nature of the application, network and storage requirements.
