

# MDfit Provider Directory Management Datasheet

*Put the power of accurate contact and profile data in each provider's hand.*

## Directory Mgmt. Benefits

- Built-in-Governance
- In-line Data Updates
- Single Source of Truth Reconciliation
- Provider Engagement
- Data Validation Workflows
- Integrated & Bi-Directional Approach
- Information Accuracy
- Mobile Application Ready for IOS & Android

## Engage Your Providers:

Unlike credentialing systems, we provide a tool that gets more eyes on provider directory profiles & creates an environment of constant data validation.

## One Fitting Solution:

Our dedicated team creates a strategy to consolidate your disparate scheduling and provider data sources. We then create useful directories, provider profiles, and standard scheduling protocols. This strategy is applied to provider groups, a single hospital, or an entire health system to better manage your provider data.

**“ Eliminate faxes, phone calls, and paper mailings by creating an electronic directory validation workflow. ”**

## How It Works

Data validation workflows allow for accurate and continuous updates to provider data. Data requirements are tailored to both CMS and state provider directory regulations. Multiple built-in workflows enable directory validation and corrections to be performed directly by providers or delegated to more appropriate office staff. You'll always know when and by whom a provider's directory profile was last reviewed, validated, and updated.

## Automated Validation

During service initiation and continuously thereafter, provider directory management workflows allow quick data updates. Automated and manual provider data validation workflows continue for the duration of the MDfit service. Reminder emails and optional phone calls can be used to augment when providers and practices are unresponsive. Platform training is conducted for office managers, scheduling, and patient access staff.

“ Clinical condition surveys & data analysis are conducted to precisely capture a provider's clinical scope of practice & validate demographic, practice & office data. ”

### Contact us today:
