- Matching Across Specialties
- Location Awareness
- Patient Clinical History Context
- Provider Designated Preferences
- Matching Analytics & Reporting
- Reduce Wrong Appointments

Engaging Your Patients:

Quickly identify and schedule the ideal provider for each patient, every time.

One Fitting Solution:

Our technology consolidates your scheduling workflows and aligns patient conditions, history, and preferences with extensive provider details, strengthening your patient-clinician connection.

“

MDfit uses a complex “best-fit” algorithm to create a prioritized list of providers for each patient based on their needs and preferences.

”

Who Patients Want

Your patients benefit from knowing they are scheduled with the best provider for their condition and preferences. Your providers benefit from always seeing patients appropriate for their clinical scope of practice. Your organization benefits by scheduling across departments and specialties, eliminating wasted resources when patients are seen by the wrong provider.

When It Matters

By solving the provider to patient search & match problem, MDfit enables every scheduler and concierge to quickly handle all common appointment related questions a patient may have. Less than a third of the top U.S. hospitals and health systems are able to answer the simple patient posed question: “who is the best provider to treat my clinical condition?” MDfit allows you to answer this and hundreds of other common patient questions when it matters most.

“ Match & schedule the optimal provider for each patient, every time! ”
