

MDfit Mobile App Directories Datasheet

Allow your providers to quickly navigate to accurate information to coordinate the best care.

Mobile Ready Benefits

- Intuitive User Interface
- Access On Both IOS & Android
- Advanced Search & Sort
- Schedule Integration
- Connecting Providers Across Organizations
- Direct Referrals & Transfers
- Expanded Provider Knowledge
- Build A Sense of Community

Engaging Your Providers:

Convert provider profile views to scheduled and referral appointments. Enable your provider to “get back to the grassroots of medicine.”

Connecting Providers:

Allow colleagues across town and across organizations to connect and coordinate the best possible care for your patients. Combine provider directory information with appointment availability, scheduling, and requests to optimize your referral capabilities.

“ A powerful provider directory smartphone application used by patients and care givers, to support appointment scheduling, referrals, and finding the exact right provider. ”

How We Connect

We begin with our proven application interface and framework built to engage providers. We then incorporate style elements to meet your organization brand specifications. Mobile directory applications are only as useful as the data contained within them. The MDfit data input processes precisely captures a provider's clinical scope of practice and validates demographic, practice, and office data. Our shared mission is to enable patients and providers to quickly and easily "Find the Perfect Care, Anytime, Anywhere". Our team is ready to assist with proven launch strategies and key-user training.

Launch & Reporting

We simultaneously push your white-labeled application to both Android and iOS App stores. New feature development and bug fixes are included for the duration for the service. Once launched, built-in reporting analyzes application usage trends, providing intelligence for your ongoing mobile application strategy.

“ Our white-labeled mobile applications are responsible for tens of thousands provider-to-provider connections for care. ”
