✈MDfit. **Orders Management** Datasheet

Enable your staff to manage electronic patient orders more efficiently.

Orders Mgmt. Benefits

· Eliminate Paper-Based Orders

· Reduce Human Error

· Coordinate Care Across Locations

· Accept Common Diagnostic Orders

· Integrated With EMRs

· Create a Uniform Experience

Patient Experience Above All:

Give your patients the experience they demand through decreased wait times and elimination of last-minute order verification phone calls and paper processes.

Traditional Orders:

Every day patients are given paper clinical diagnostic and ancillary service orders that won't be filled that same day or at that same location. Entering electronic orders create their own problems. When your patient finally arrives for their service, finding their order across disparate electronic systems can be cumbersome and time consuming for staff.

" Your patients can now show up at any location across your health system to have their electronic order filled, anytime. "

How It Works

A provider places an electronic order into one of your clinical systems. The patient is instructed to show up at any appropriate location to fill their order. Behind the scenes, MDfit's HL7 listener gathers those orders from the originating system and holds them in a queue until the order expires or the patient arrives for their service. When the patient arrives, your staff can quickly identify the outstanding order. With one simple click, MDfit forwards the order to the correct destination system (i.e. laboratory, radiology, pathology) and determines if a new encounter number is needed for registration and billing workflows.

Why It Works

MDfit allows all clinical staff to quickly find and release outstanding outpatient electronic orders when a patient presents for services at a different date or location from when or where the order was originally placed. Our unique search functionality works without requiring detailed data entry or knowledge of the source or destination clinical systems.

" It's time to eliminate lost paper orders. "
