

Referral Management Datasheet

Coordinate referrals across your organization and with affiliated providers.

Referral Mapping Benefits

- Improved Care Coordination
- Condition-Based Referral Matching
- Referral Redirect Capability
- Eliminate Paper & Phone Calls
- Reduce Lost Referrals
- “Refer Anywhere” Capability
- Advanced Analytics & Reporting
- Location & Availability Based Referrals

Engaging Your Providers:

Quickly identify and refer the ideal provider for each patient, every time.

One Fitting Solution:

Our technology identifies the ideal referral provider, consolidates your referral orders, places them into trackable work queues for schedulers, and provides status updates to both providers and patients, in real-time.

“ MDfit ensures that all parties, including the patient, are up-to-date on the status of each referral, allowing for effective care coordination and accurate and timely referrals workflows. ”

What is Fast

Speed to referred care is significantly improved by removing the delays associated with paper based referrals and the inevitable incorrect referral to the wrong specialist. Patients can be scheduled before leaving their primary care office. The MDfit framework allows for mis-referrals to be redirected in real-time to a more appropriate provider.

Where We Differ

Traditional physician-to-physician referral processes have been around for decades. Today, at their best, they involve electronic referral entry within an integrated electronic system. At their worst, they require paper, phone calls, and voicemails. In both scenarios the patient is often left to manage the referral process themselves, with all parties unsure of the exact referral status.

“ **Optimize & streamline** your patient scheduling workflows! ”

Contact us today:

Learn how MDfit creates a coordinated approach for optimal referral management and care coordination between your affiliated and employed providers, reducing lost referrals, patient leakage, and incorrect appointments.
